

Why Warsaw

The capital of Poland offers countless opportunities to study and spend time in exciting and interesting ways.

With its Old Town, green parks, museums, theaters, great pubs, clubs and restaurants, galleries and scientific centers Warsaw truly is an appealing and impressive place to explore.

Based at the heart of Poland and Europe Warsaw is also a convenient starting point to travel either to the Baltic Sea or Tatra Mountains as well as the rest of Europe.

Warsaw is also one of the cheapest capitals in Europe which makes it even more attractive as you can spend the extra money on travel, shopping or partying!

Why Warsaw School of Computer Science

WCS is the only university in Poland where the members of the Rector's Advisory Board are at the same time general managers of the world's biggest IT companies such as Microsoft, Hewlett-Packard, Cisco, Intel, IBM and Oracle.

Our School is one of the most dynamically developing private universities which is also unique due to the fact that we offer studies in one and only field of science – computer science!

Master of Science in IT Project Management

Our educational offer is based on years of experience in teaching students on the Bachelor and Master level within the field of computer science.

We were assessed by the Polish Accreditation Committee in years 2003-2015 and received partial **outstanding** rating for the quality of scientific research and the quality of academic staff.

- Information System Modeling and Analysis
- Distributed Processing
- Advanced Software Engineering
- Advanced Object-Oriented Design
- Advanced Database Systems
- Data Mining
- Mobile Systems
- Network Technologies
- Project Evaluation and Validation
- Project Management Technologies

The mode of study is full time and there are two short breaks during the academic year, one around Christmas and one at Easter time.

OUR PROMISE

MSc in IT Project Management offers students knowledge and skills needed to solve real-world IT project management problems. The program provides students with professional expertise needed to plan and execute a range of IT projects and to avoid typical pitfalls of missed deadlines and mismanaged resources.

The program also enables students to gain experience in currently available project management technologies and introduces new developments regarding decision support tool such as simulation and artificial intelligence techniques.

Due to evolving character of the discipline students are taught concepts and skills required to develop new or enhance existing procedures to solve project management problems.
